Read Me file

for the code used to computationally solve the model in the manuscript AEJMacro-2008-0164

"Accounting for the Rise in Consumer Bankruptcies"

by Igor Livshits, James MacGee and Michèle Tertilt.

We used a Fortran 90 program   <u>AEJMacro-2008-0164.f90</u>   to compute the equilibria of the model.
The code uses an input file named   <u>inputCut.txt</u>.
The content of the input file is explained in the text file   <u>inputCut.info</u>.

All three files are included.
